Program Structures & Algorithms

Spring 2021

Assignment No. 1

- **Task :** Deducing the relationship between distance(d) and steps taken(n) for the Random Walk algorithm in 2D space.
- **Output**

```
Run: RandomWalk x
/Library/Java/JavaVirtualMachines/adoptopenjdk-8.jdk/Contents/Home/bin/java ...
10000 steps: 73.16661108106548 over 20 experiments | sqrt(10000): 100.0
20000 steps: 129.64452355199222 over 20 experiments | sqrt(20000): 141.4213562373095
30000 steps: 121.62688369431264 over 20 experiments | sqrt(30000): 173.20508075688772
40000 steps: 215.4860470654643 over 20 experiments | sqrt(40000): 200.0
50000 steps: 194.43754896739375 over 20 experiments | sqrt(50000): 223.60679774997897
60000 steps: 230.9962343342469 over 20 experiments | sqrt(60000): 244.94897427831782

Process finished with exit code 0
```

- **Relationship Conclusion:** From my analysis I believe distance(d) tends to \sqrt{n} as the number of experiments increases. It does seem to go above and below \sqrt{n} but mostly revolves around this value.

$$d \approx \sqrt{n}$$

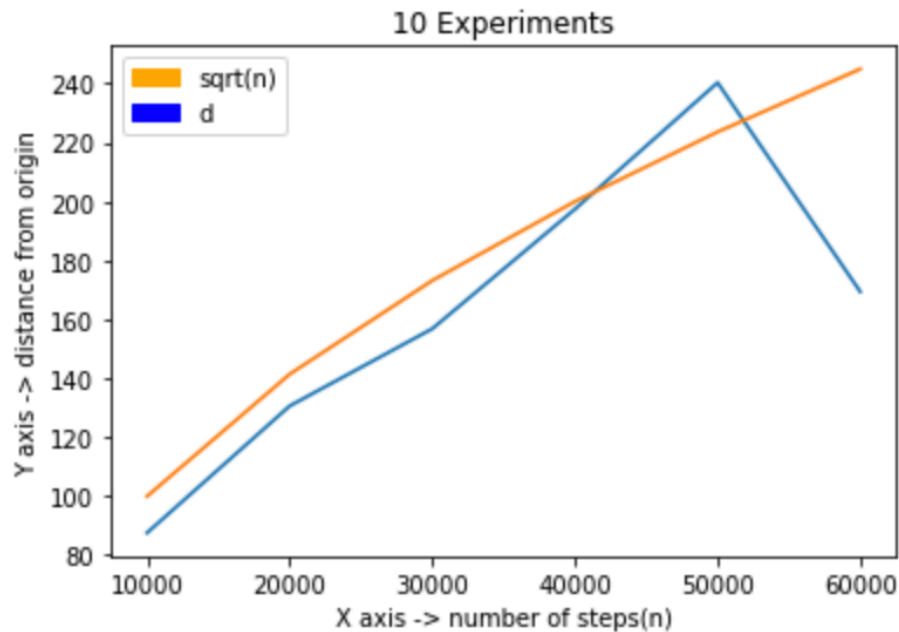

- **Evidence to support the conclusion:** I have tabulated the value of distance from origin(d), total steps taken(n), \sqrt{n} and number of experiments to see the trend to establish that $d \approx \sqrt{n}$

	no of steps	d	sqrt(n)	no of experiments
0	10000	87.599381	100.000000	10
1	20000	130.640500	141.421356	10
2	30000	156.844697	173.205081	10
3	40000	197.418640	200.000000	10
4	50000	240.325248	223.606798	10
5	60000	169.398240	244.948974	10

	no of steps	d	sqrt(n)	no of experiments
0	10000	83.175622	100.000000	20
1	20000	128.531647	141.421356	20
2	30000	141.909917	173.205081	20
3	40000	147.448028	200.000000	20
4	50000	219.317182	223.606798	20

	no of steps	d	sqrt(n)	no of experiments
0	10000	87.346398	100.000000	50
1	20000	129.753245	141.421356	50
2	30000	162.818828	173.205081	50
3	40000	195.443042	200.000000	50
4	50000	215.965151	223.606798	50
5	60000	206.677797	244.948974	50

- **Graphical representation:** We can get a better idea from the graphs that the $d \approx \sqrt{n}$. This is clearer when the number of experiments increases

- **Unit tests result:**
